

NOTULAE TAXINOMICAE, CHOROLOGICAE,
NOMENCLATURALES, BIBLIOGRAPHICAE AUT PHILOLOGICAE
IN OPUS "FLORA IBERICA" INTENDENTES

NOMENCLATURE AND TYPIFICATION OF WESTERN EUROPEAN
JASIONE (CAMPANULACEAE)

In the course of preparing the account of *Jasione* L. (Campanulaceae) for a forthcoming volume of *Flora iberica* (vol. 14), we found it was essential, because of the paucity of such information, to typify a large number of taxa of differing rank. Some were widespread European taxa, others were of limited distribution. In such a complex genus as *Jasione* where names have often been misapplied and where numerous taxa not meriting formal recognition have been described, exact typification, even more than usual, is of fundamental importance. Although the many taxa described by Boissier and Reuter in the 1830-50s have been comprehensively dealt with by Burdet, Charpin & Jacquemoud –in Candollea 38: 412-419 (1983)–, and the variants and some of the relatives of *J. montana* by Parnell –in Watsonia 16: 249-267 (1987)–, a majority of the taxa in the genus has never been properly typified. In order to make the information that we have assembled as comprehensive and useful as possible, we have included both previously published typifications and the results of our own extensive investigations. An early (not always reliable) source of nomenclature and synonymy (not typification) in *Jasione* is Schmeja's revision of the genus –in Beih. Bot. Centralbl. 48(2): 1-51 (1931).

For easy reference the accepted taxa (according to our *Flora iberica* account) are listed in alphabetical order. In addition to validly published names, it includes *nomina nuda* and other invalid names that have been applied in the Iberian peninsula.

Our Flora account of *Jasione* is substantially different from that of Tutin –in Tutin & al., *Flora Europaea* 4: 100-102 (1976)– and the *Med-Checklist* –Greuter & al., *Med-Checklist* 2: 146-149

(1984)– though in general accord with Parnell –loc. cit.– for *J. montana* and Köster for *J. crispa* –cf. "*Jasione crispa* in westlichen Mediterrangegebiet" (1994)–. We recognise only 10 species in the *Flora iberica* area together with 4 subspecies (in *J. crispa*) and 5 varieties (4 in *J. montana*, 2 in the resuscitated *J. maritima*).

Many taxa have variously been switched between species and accorded differing rank. This emphasizes the difficulties, some man-made, of taxonomy and nomenclature in *Jasione*.

J. cavanillesii C. Vicioso in Anales Jard. Bot. Madrid 6(2): 80, 92 lám. 4 (1946)
= *J. amethystina* subsp. *cavanillesii* (C. Vicioso) C. Vicioso & M. Laínz in Bol. Inst. Estud. Asturianos, Supl. Ci. 5: 30 (1962); *J. humilis* (Pers.) Lois. subsp. *cavanillesii* (C. Vicioso) Rivas Mart. in Anales Inst. Bot. Cavanilles 21: 270 (1964); *J. crispa* subsp. *cavanillesii* (C. Vicioso) Tutin in Bot. J. Linn. Soc. 67: 278 (1973)

Type loc.: [Spain, Santander, Picos de Europa] “Hab. Peña Vieja (Cantabria)”.

Type: “in saxosis calcareis, Picos de Europa, «Peña Vieja» (Santander), 4-IX-1944, Leg. M. Martín & C. Vicioso. Det. C. Vicioso” (holo., MA 186970!) –cf. E. Bayón in Ruizia 4: 127-128, 172 (1987).

- Type: "Oran, 1840-1842, Durieu" (lecto., G!) –cf. J. Parnell in Watsonia 16: 265 (1987).
- *J. arenaria* Salzm., nom. nud. in sched.
- J. crispa* (Pourr.) Samp.** in Ann. Acad. Polytechn. Porto 14: 161 (1921)
subsp. *crispa*
- = *Phyteuma crispum* Pourr. in Hist. & Mém. Acad. Roy. Sci. Toulouse 3: 324 (1788); *J. montana* var. *humilis* Pers., Syn. Pl. 2: 215 (1806); *J. humilis* (Pers.) Loisel. in J. Bot. Agric. 2: 266 (1813), nom. illeg.; *J. perennis* subsp. *humilis* (Pers.) Bonnier & Layens, Tabl. Syn. Pl. Vasc. France: 196 (1894); *J. amethystina* subsp. *humilis* (Pers.) Rivas Mart. in Publ. Inst. Biol. Aplicada 42: 121 (1967), comb. inval.
- Type loc.: [France] "Dans les Pyrénées, à Eynes, Madres, Llaurenti, Caroll. &c.". Type: The herbarium sheet [Pourret?] 988 at MAF has twelve specimens and three labels: "Phyteuma crispa Pourr. - Act. tolos. tom III", "Phyteuma crispa P. var. ?, 29 en id" and "Phyteuma crispa P. var.: donación Barbier". M. Lafinz in Bol. Inst. Estud. Asturianos, Supl. Ci. 15: 38 (1970) selected no. 988 as "holotype". Later, Rivas Martinez in Candollea 31: 112 (1976) chose as lectotype the "largest and better developed of those with large capitula" without indicating to which label it refer to. None of these specimens refers to the localities cited in the protologue. Pourret specimens are mainly housed at MAF and P and no indication is given by Lafinz or Rivas Martinez whether there is *Phyteuma crispum* material elsewhere. There are, however, further specimens at G! (a Pourret specimen without locality "Phyteuma crispa, Pourr. act. tolos. tom III", bearing a red "Typus" label) and P ("Jasione humilis DC. - Phyteuma crispa Pourr. - Collection de l'Abbé Pourret, extraite de l'herbier légué par le M. le Dr Barbier 1847"). There is also at P a separate Pourret herbarium, "Corona florae Narbonensis et Pyrenais", but no *Jasione* specimens are in it.
- = *J. fallax* Willk. in Flora 35: 198 (1852)
- Type loc.: [Spain, Zaragoza] "Hab. in glareosis montis Moncayo in consortio speciei antecedentis [*Jasione humilis* Lois.] sed multo rarior. Legi d. 15 Julii cum floribus".
- Type: "Aragon, Moncayo, 15 vii 1850, Willkomm s.n." (holo., COI!).
- The type is a small specimen with clumps of sturdy stems and a thick woody (?) grazed) rootstock. Stems pressed flat, the longest stem 8 cm long. Leaves narrow-lanceolate, with long hairs at base, margins thickened. Apical and sometimes lateral trichoids (small multicellular structures, up to 0.3 × 0.1 mm, adpressed to the adaxial leaf surface) present. Peduncle c. 2 cm, glabrous except for long hairs at apex. Bracts ovate, acute, crenulate at middle portion. Pedicels 2 mm. Calyx teeth subulate, with long hairs.
- = *J. humilis* var. *pygmaea* Willk. in Willk. & Lange, Prodr. Fl. Hispan. 2: 283 (1868); *J. sessiliflora* f. *pygmaea* (Willk.) Pau in Actas Soc. Esp. Hist. Nat. 29: 288 (1900); *J. humilis* subsp. *centralis* Rivas Mart. in Anales Inst. Bot. Cavanilles 21: 270 (1964); *J. amethystina* subsp. *centralis* (Rivas Mart.) Rivas Mart. in Publ. Inst. Biol. Aplicada 42: 121 (1967); *J. crispa* subsp. *centralis* (Rivas Mart.) Tutin in Bot. J. Linn. Soc. 67: 278 (1973); *J. crispa* subsp. *centralis* (Rivas Mart.) Rivas Mart. in Anales Real Acad. Farm. 40: 72 (1974), comb. superfl.
- Type loc.: [Spain] "(*J. amethystina* Boiss., Reut. pl. exs. 1858! non Lag. Rodr. *J. humilis* Cut. Flora Madrit. p. 456!) (...) in glareosis regionis alpinae Pyrenaeor. oriental. (Csta.), montis Moncayo Aragoniae (Wk.) et montium Carpetanor. (in Sierra de Guadarrama jugis et cacuminibus, Bss. Reut.! Cut.!) – Majo, Julio".
- Type: [Spain, Madrid] "*Jasione humilis* Loiss. Pico de la Maliciosa. Junio" [mss. Isern]; "La Maliciosa –26 Junio" [mss. Cutanda] (lecto., selected here, MA 122432!) –cf. Cutanda, Fl. Comp. Madrid: 456 (1861).
- J. humilis* subsp. *centralis* Rivas Mart. was described as a *nom. nov.* Although there is no clear indication of a basionym it can be assumed that the first of the 4 names cited, "*J. humilis* Loiss. var.

pygmaea Wk. in Wk. & Lge. 2: 283, 1870", was intended as the basionym of it.

= *J. nuriensis* var. *eliasii* Sennen, Pl. Espagne 1927, n.^o 6127 (1927-28), in sched., nom. inval.?

Type loc.: [France] "1927 (...) N.^o 6127. Jaside Nuriensis Sennen var. Eliasii ? ej. stirps humilis. Cerdagne: Serra dels Clots, pâturages alpins, 2400 m. 12-VIII [1927]. Sennen et Elias. Note.—Plante moins développée, glabrescente, plus gazonnante" (iso., BM!, COI!, GI!, MA 122392!).

= *J. nuriensis* Sennen in Bol. Soc. Ibér. Ci. Nat. 28: 175 (1930); Sennen, Pl. Espagne 1919, n.^o 3731 (1919-20), in sched., nom. nud.; Sennen in Bull. Soc. Bot France 73: 657 (1926-27), nom. nud.; Sennen in Bull. Soc. Bot France 74: 387 (1927), nom. nud.

Type loc.: [Spain, Gerona] "N.^o 3.731 (...) Pyrénées Catalanes à Nuria, rochers granitiques, vers 1850 m".

Type: "N.^o 3731 (...) Pyrénées de Catalogne: Nuria, rochers granitiques, 1850 m. 1919-13-VIII" (iso., MA 122394!).

= *J. brevisepala* Rothm. in Cavanillesia 7: 121 (1935); *J. crispa* subsp. *brevisepala* (Rothm.) Rivas Mart. in Candollea 31: 112 (1976)

Type loc.: [Spain] "Léon in cacumine montis Teleño pr. Astorga, in pascuis caespitem densam formante, ad 2180 m, solo siliceo, 31 vii 1933, Rothmaler 556".

Type: "Léon, Cabrera alta, sonnige Triften auf dem Gipfel des Teleno, Kalk, 2180 m, 31 vii 1933, Rothmaler 556" (holo., JE!).

The type which also bears the nomen "*J. microcalyx* n. sp." is a very inadequate specimen with only 3 flower heads and several tufts of leaves.

Recent (July 1998) searching by the authors at the type locality failed to find plants corresponding with Rothmaler's description.

- *J. biggerensis* Pau, nom. nud. in sched. (MA 12467!)

- *J. microcalyx* Rothm., nom. nud. in sched. (see above).

J. crispa* subsp. *mariana (Willk.) Rivas Mart. in Anales Inst. Bot. Cavanilles 28: 45 (1972)

≡ *J. mariana* Willk. in Willk. & Lange, Prodr. Fl. Hispan. 2: 284 (1868); *J. humilis* subsp. *mariana* (Willk.) Rivas Mart. in Anales Inst. Bot. Cavanilles 21: 121 (1964); *J. amethystina* subsp. *mariana* (Willk.) Rivas Mart. in Publ. Inst. Biol. Aplicada 42: 121 (1967), comb. inval.

Type loc.: [Spain, Ciudad Real or Jaén] "in fissuris rupium schistosarum montium Marianorum (Puerta de Despeñaperros et alibi)".

Type: "Sierra Morena, in fissuras rupium faucium Despeñaperros, 29 VII 1845, Willkomm 1026" (lecto., selected here, COI!).

J. crispa* subsp. *tomentosa (A. DC.) Rivas Mart. in Anales Inst. Bot. Cavanilles 28: 45 (1972)

≡ *J. humilis* var. *tomentosa* A. DC., Monogr. Campan.: 105 (1830); *J. sessiliflora* var. *eriantha* Boiss., Diagn. Pl. Nov. Hisp.: 21 (V-1842) [in Biblioth. Universelle Genève ser. 2, 38: 213 (VI-1842)], nom. illeg.; *J. humilis* subsp. *tomentosa* (A. DC.) Rivas Mart. in Anales Inst. Bot. Cavanilles 21: 270 (1964), comb. inval.; *J. amethystina* subsp. *tomentosa* (A. DC.) Rivas Mart. in Publ. Inst. Biol. Aplicada 42: 121 (1967); *J. tomentosa* (A. DC.) Rivas Mart. in Lagascalia 15 (Extra): 117 (1988)

Type loc.: [Spain, Ciudad Real] "Var. B in Novâ Castiliâ (...) Varietatem B à celeb, Lagasca accepi (...) Crescit propè Herenciam in Novâ Castiliâ".

Type: "Herencia d. del Valle, 1803, herb. *Pavon*" (lecto., GI!; iso., MA 154729!) —cf. H. Burdet & al. in Candollea 38: 417 (1983).

≡ *J. diapensifolia* Gand. in Bull. Soc. Bot. France 59: 61 (1912)

Type loc.: [Spain, Badajoz, 1908] "Hab. Cordoba, supra Almorchon ad rupe meridionales sparse". Almorchón today is in the province of Badajoz.

= *J. crispa* subsp. *segurensis* Mota, C. Diaz, Gómez Merc. & F. Valle in Lagascalia 15(Extra): 479 (1988)

Type loc.: [Spain] "Jaén, Sierra de Segura. Cerca de Orcera, 1100 m, 30-VII-1985, Valle, Gómez-Mercado & Mota" (GDAC 24702, holotypus; MAF 126753, isotypus).

Type: "Jaén, Sierra de Segura prope Orcera, 1100 m, 30SWH2142, 30 VII 1985. Valle, Gómez-Mercado & Mota" (iso., MAF 126753!).

J. crispa* subsp. *tristis (Bory) G. López in Anales Jard. Bot. Madrid 56: 166 (1998)

≡ *J. tristis* Bory in Ann. Gén. Sci. Phys. 3: 10 (1820) ["Florule de la Sierra-Nevada"]; *J. amethystina* var. *tristis* (Bory) A. DC. in DC., Prodr. 7: 416 (1838)

Type loc.: [Spain, Granada, Sierra Nevada] "Entre les pierres à la montée du Collado de Velleta [sic]".

Type: No Bory types have been traced.

It is unfortunate that the long established name for this relatively distinct taxon, *J. amethystina*, has to be replaced by a new name in accordance with the technicalities involving the application of autonym

names as laid down in the International Code of Nomenclature. When Sennen described *J. tristis* subsp. *ateridae* Sennen it automatically established, by today's nomenclatural rules, a *J. tristis* subsp. *tristis* and thus the earliest name for the Sierra Nevada endemic subspecies is that above. Sennen's predilection for describing new varieties, subspecies or species, usually based on trivial reasons, has continued to give trouble to botanists long after his lifetime.

= *J. amethystina* Lag. & Rodr. in Anales Ci. Nat. 5(15): 271 (1802); *J. crispa* raça *amethystina* (Lag.) Samp. in Ann. Sci. Acad. Polytech. Porto 14(3): 161 (1921); *J. humilis* subsp. *amethystina* (Lag. & Rodr.) Rivas Mart. in Anales Inst. Bot. Cavanilles 21: 270 (1964); *J. crispa* subsp. *amethystina* (Lag. & Rodr.) Tutin in Bot. J. Linn. Soc. 67: 278 (1973)

Type loc.: [Spain, Granada, Sierra Nevada, leg. G. Thalacker, VIII-1801].

Type: "Thalacker Sierra Nevada de Granada 1801" [mss. Cavanilles]; "Jasione obtusa sp. nov." [mss. J.D. Rodríguez] (lecto., selected here, MA 154734!; iso., G!).

J. foliosa Cav., Icon. 2: 38, tab. 148 fig. 1 (1793)

Type loc.: [Spain, Alicante] "Habitat copiose prope cacumen montis Orospedae vulgo Mariola in tractu Alt de Moncabrer contra septentrionem in saxorum fissuris".

Type: "habitat ad saxorum rimulas in frigidis Mariolae, 1 Augusti" (lecto., MA 154754!) –cf. F. Bellot & M.E. Ron in Bol. Soc. Brot. ser. 2, 47, Supl.: 347 (1972).

There is another Cavanilles specimen of *J. foliosa* in the "Herbier de Ventenat", Geneva (G), "Jasione foliosa Cav., tab. 148, ex monte Valentino, Mariola rara Cavan. misit".

= *Phyteuma minutum* Agardh ex Schult. in Roemer & Schult., Syst. Veg. 5: 86 (1820); *J. minuta* (Agardh ex Schult.) Pau in Actas Soc. Esp. Hist. Nat. 27: 90 (1898); *J. foliosa* var. *minuta* (Agardh ex Schult.) Cuatrec. in Trab. Mus. Ci. Nat. Barcelona 12: 443 (1929); *J. foliosa* subsp. *minuta* (Agardh ex Schult.) Font Quer in Cavanillesia 7: 79 (1935)

Type loc.: [Spain, Málaga or Granada] "Amicissimus Agardh e summis Sierrae Texedae misit inscritam: «Campanula minuta mihi ad interim, sed potius novum genus»".

Type: BM!, Z?

= *J. nummulariifolia* Pau in Actas Soc. Esp. Hist. Nat. 27: 90 (1898) ["nummulariaefolia"]

Type loc.: [Spain, Málaga] "Sierre de la Nieve, Reverchon 1890: 554".

Type: "Plantes de l'Andalousie. 1890. E. Reverchon. No. 554 (...) Sierra de la Nieva [sic] sur les rochers calcaires. 20 août." [mss. Reverchon] (holo., MA 122447!; iso., E!).

J. laevis Lam., Fl. Franç. 2: 3 (1779)

= *J. perennis* Lam., Encycl. 3: 216 (1789), nom. illeg.

Type loc.: [France] "elle croit au [Massif Central] Mont-d'Or en Auvergne, où été observée par M. le Monnier".

Type: "Jasione perennis, lam. dict. Jasione laevis, fl. fr. 398" (lecto., selected here, P-LA, microfiche!).

The specimen in the Lamarck herbarium has no indication of locality and, therefore, there is no obvious connection with the protologue. It is, however, the only specimen in the Lamarck herbarium and apparently the only candidate for the type of the species.

= *J. carpetana* Boiss. & Reut. in Boiss., Voy. Bot. Espagne 2: 745 (1845); *J. perennis* var. *carpetana* (Boiss. & Reut.) Willk. in Willk. & Lange in Prodr. Fl. Type loc.: [France] "in maritimis Galliae occidentalis".

Type: [France, Gironde] "in arenosis maritimis, Teste de Buch, 1824, Dufour 58" (lecto., selected here, G-DC microfiche!).

In A. DC., Monogr. Campan.: 103 (1830), is: "In sabulosis maritimis Galliae meridionalis occidentalis, loco dicto Teste de Buch".

= *J. montana* var. *imbricans* J. Parn. in Watsonia 16: 264 (1987)

Type loc.: [Spain, La Coruña] "Finisterre, 1928, Lacaita 33283".

Type: "Finisterre, [in litore arenoso, 12 vii], 1928, Lacaita 33283" (holo., BM!).

***J. maritima* var. *sabularia* (Cout.) Sales & Hedge, comb. nov.**

≡ *J. montana* L. var. *sabularia* Cout., Fl. Portugal: 603 (1913)

Type loc.: [Portugal] "Areias marítimas: do Minho ao Alemtejo".

Type: [Portugal, Douro Litoral] "Praia de Matosinhos, Porto, vii 1886, A. R. Cunha s.n. (lecto., selected here, LISU!).

North-western shores of Portugal only. The Alentejo in the original description could have been based on *J. montana* var. *montana* that can also grow near the sea.

- *J. lusitanica* auct.

- *J. montana* var. *lusitanica* auct.

***J. montana* L., Sp. Pl.: 928 (1753)**

var. *montana*

Type loc.: "Habitat in Europae collibus siccissimis".

Type: "Rapunculus scabiosae capitulo caeruleo C.B. p." (lecto., BM-Herb. Cliff. 426 *Jasione!*)

-cf. Parnell in Regnum Veg. 127: 58 (1993).

In the type specimen no roots are present. The plant is profusely branched, with upper branches up to 18 cm long, leafless and glabrous at apex. Leaves up to 15 × 1-1.5 mm, entire, flat, pubescent. Bracts lanceolate, quite narrow at base, flat, with remote shallow teeth, margins not thickened, pubescent, somewhat loose. Pedicels 4-5 × length of ovary. Calyx teeth c. 1.5 × ovary, linear, virtually reduced to midrib, glabrous. Heads 10-15 mm wide, many-flowered.

The specimen has the features often associated with what has been called *J. montana* var. *echinata*.

The distribution given in *Hortus Cliffortianus*: 426 (1737) is "crescit in petris, montibus sterilissimis, collibus graminosis aridissimis Sveciae, Germaniae, Galliae, Belgii".

= *J. lusitanica* A. DC., Monogr. Campan.: 105 (1830); *J. montana* raça *lusitanica* (DC. fil.) Samp., Lista Esp. Herb. Portug.: 127 (1913); *J. montana* var. *lusitanica* (A. DC.) Schmeja in Beih. Bot. Centralbl. 48, 2: 34 (1931); *J. maritima* var. *lusitanica* (A. DC.) Schmeja ex H. Buch. in Comment Biol. 10(17): 69 (1951)

Type loc.: [Portugal, Estremadura] "Habitat propè Olosippum. [sic] (v. in herb. Banks) (...) In herbario banksiano Phyteuma? at Jasione perennis? vocatur...".

Type: [Portugal, Estremadura] "Lisbon J.B." (holo., BM!). Collected by Joseph Banks in Nov. 1766 during his 6-week stay in Lisbon, Portugal on his way back, circuitously, from Labrador to England -cf. H.B. Carter, Sir Joseph Banks 1743-1820: 38 (1988).

The type specimen is a biennial (?), ± 8 cm high. Stems 5, branched, loosely ascendent, densely leafy. Leaves broad-lanceolate, thin, with 1-many marginal trichoids, pubescent, green. Heads 6 (2 of which are virtually destroyed). Bracts ± lanceolate to ovate, entire. Calyx teeth linear, glabrous.

The above type specimen is almost identical with the type of *J. rosularis*.

The name *J. lusitanica* has been misapplied in previous literature apparently because the type has not been studied before.

= *J. echinata* Boiss. & Reut., Pugill. Pl. Afr. Bor. Hispan.: 73 (1852); *J. montana* var. *echinata* (Boiss. & Reut.) Willk. in Willk. & Lange, Prodr. Fl. Hispan. 2: 282 (1868); *J. montana* subsp. *echinata* (Boiss. & Reut.) Nyman, Conspl. Fl. Eur.: 486 (1879); *J. montana* f. *echinata* (Boiss. & Reut.) C. Vicioso in Bol. Soc. Aragonesa Ci. Nat. 10: 102 (1911); *J. montana* subsp. *echinata* (Boiss. & Reut.) Rivas Mart. in Publ. Inst. Biol. Aplicada 42: 122 (1967), comb. superfl.

Type loc.: [Spain] "Hab. in sylvaticis et collibus Baeticae variis locis, circā Gaucin, Estepona, San Roque, Cadix. (herb. Fauché), Ronda (Bourgeau pl. exs. 1849), in Castellā veteri circā Matriatum al Pardo, Sierra de Guadarrama (Reuter)".

Type: [Spain, Málaga] "Hisp. austr., colles Gaucin mai 1837" (lecto., G!) -cf. H. Burdet & al. in Candollea 38: 414 (1983).

The type specimen has a thick indumentum on leaves and stem. At G! there are various syntypes from San Roque, Cadiz, Ronda and Sierra de Guadarrama.

= *J. rosularis* Boiss. & Reut., Pugill. Pl. Afr. Bor. Hispan.: 74 (1852); *J. laevis* subsp. *rosularis* (Boiss. & Reut.) Tutin in Bot. J. Linn. Soc. 67: 277 (1973)

Type loc.: [Spain, Cádiz] "Hab. circà San Roque prope Gibraltar in monte Silla de la Reyna dicto Reuter, fl. Junio".

Type: "San Roque Silla de la Reyna, Boiss & Reut." (lecto., G!) –cf. H. Burdet & al. in Candollea 38: 416 (1983).

A previously misunderstood taxon which in *Med-Checklist* (cf. W. Greuter & al. 2: 148, 1984) was regarded as a subspecies of *J. laevis* and, in *Flora Europaea* (cf. T.G. Tutin in Tutin & al., Fl. Eur. 4: 102, 1976) as a rare plant restricted to one locality in the south of Spain. Study of the type gatherings (of which there are other specimens from the same locality only 1 of which, the lectotype, fully matches the type description) showed that it is a biennial or short-lived plant not different from *J. montana*; often it has sterile leaf-rosettes.

= *J. espadanae* Pau, Not. Bot. Fl. Españ. 1: 19 (1887)

Type loc.: [Spain, Castellón] "Hab. en la 'sierra de Espadán'. Ag. 1883".

Type: "Valentia: Sierra de Espadan. Aug. 1883" [mss. Pau] (lecto., selected here, MA 122296!).

=? *J. ambigua* Merino, Fl. Galicia 3: 593 (1909)

Type loc.: [Spain] "(Herbar. número 2.373) (...) Abunda en los montes que circundan la parroquia de Requias, Ayuntamiento de Muíños, Orense".

The Merino type of *J. ambigua* was not traced in any Spanish herbarium (cf. Laínz in An. Inst. Forest Invest. Exper. 10: 317, 1966). Plants recently collected by us (in August 1998) at the type locality do not agree with the description, being slender, small (c. 25 cm) annuals. The protologue refers to a perennial, 30-60 cm high with robust stems and flower heads 4-5 cm diameter (much wider than in any specimens observed in the genus). Nevertheless, the description of *J. ambigua* agrees better with *J. montana* s.l. than with any other species; Laínz, in contrast, considered (l.c.) that it was a synonym of *J. crispa*.

= *J. macrocalyx* Gand. in Bull. Soc. Bot. France 59: 59 (1912)

Type loc.: [Spain, Málaga, 1908] "Hab. Chorro prope Malaga ad rupes circa stationem".

No specimens were traced at Lyon (LY) where most Gandoger specimens are housed.

= *J. cartilaginea* Sennen, Pl. Espagne 1926, n.º 5791 (1926), in sched.; Sennen in Bol. Soc. Ibér. Ci. Nat. 28: 176 (1930) ["st. montana"]; *J. montana* var. *cartilaginea* Sennen, Pl. Espagne 1918, n.º 3461 (1918-19), in sched., nom. nud; *J. montana* race *cartilaginea* (Sennen) Sennen in Bull. Soc. Bot. France 74(5/6): 387 (1927); *J. montana* var. *cartilaginea* ap. J. Parnell in Watsonia 16: 264 (1987)]

Type loc.: as below.

Type: [France, Spain] "1926 (...) N.º 5791 Jasione cartilaginea Sennen gr. montana. Cerdagne: Llivia, Angoustrine, Villeneuve, coteaux, 1250-1400 m. VI et VII [1926]" (iso., BM!, G!, MA 122298!, MA 466801!, MAF!).

= *J. × macrocephala* Sennen, Pl. Espagne 1926, n.º 5794 (1926), in sched.; Sennen in Bol. Soc. Ibér. Ci. Nat. 28: 175 (1930) ["*J. cartilaginea* × *pygmaea* hb."]; Sennen, Pl. Espagne 1917, n.º 3111 (1917-18), in sched., nom. nud.

Type loc.: [France] "1926 (...) N.º 5794. Jasione macrocephala Sennen var. glabra ej. = *J. cartilaginea* × *pyrenaea* ej. Cerdagne: Err, coteaux schisteux, 1450 m. 26-VII [1926] Inter parentes. Note.—Tige herissée dans le bas, plus ou moins sur les feuilles, glabre ou parcepiléuse dans les haut (var. *subglabra*) et pèdoncules variables quant à la longeur et à l'épaisseur (var. *longepedunculata* et *macropoda*). Le *pyrenaea*, dressé, plus reduit de taille, persente las var. *hirsuta* et parcepilosa. En résumé, groupe assez intriqué".

Type: [France] "N.º 3111. Jasione macrocephala Sennen. Cerdagne: Angoustrine et Dorras, pâturages entre 1450 et 1600 m. 1917 - VIII et IX" (iso., BM!, MA 122475!).

In the BM herbarium there are 5 plants, one of which is probably *J. laevis*. The BM specimen lacks roots, with a dense indumentum on stems & leaves and with 9 flowering shoots. There are 2 further specimens: "*J. macrocephala* var. *glabra* ej. = *J. cartilaginea* × *pyrenaea* ej., Cerdagne, Err, coteaux schisteux, 1450 m, inter parentes, 26 vii 1926, Sennen 5794" (G!) and "*J. macrocephala* var. *hirsuta* (...) - Type loc.: [Spain] "Santiago et Pico Sagro Gallaeciae; Villafranca del Vierzo! [sic]".
- Type: [Spain, La Coruña] "Santiago de Compostela, 19 VIII 1852" Herb. Joh. Lange (lecto., selected here, G!). No specimen has been traced at Copenhagen (C) where the first set of Lange's specimens is housed.
- = *J. euphrasiifolia* Porta in Atti Imp. Regia Accad. Rovereto ser. 3, 2: 214 (1896) ["euphrasiaefolia"]
- Type loc.: as type.
- Type: [Spain, Jaén] "Reg. Murc. [reino de Murcia] in glareosis dolomiticis montium sierra Segura supra pag. Orsera [Orcera], alt. 800-1000 m, Jul.". The Porta herbarium is in the Seminario Arcivescovile, Trento near Rovereto, Italy. The original label (pers. comm.), written by Huter, colleague of Porta, bears the name "Jasione montana var. gracilis"; this was subsequently changed by Porta to "J. euphrasiaefolia".
- J. montana* var. *latifolia* Pugsley** in J. Bot. 59: 215 (1921)
- Type loc.: "syntypes from Britain: Somerset, Orkney, Ireland".
- Type: "Eire, Wicklow, Bray Head, ann. 1881, Britten & Nicholson" (lecto., BM!) -cf. J. Parnell in Watsonia 16: 264 (1987).
- Possibly, the earliest name for this variety is *J. montana* var. *prolifera* DC., but as it is apparently impossible to typify the name, see comments under *J. montana* var. *prolifera* (below) it is better to adopt the name used here.

= *J. montana* var. *prolifera* DC. in Lam. & DC., Fl. Franç. ed. 3, 3: 717 (1805)

The varietal name appears for the first time in Latourr., Chlor. Luggd.: 25 (1785)!, without description; it is cited as "Luggd. Delph." [Lyon y Le Dauphiné]. Bellardi, App. Fl. Pedem.: 41 (1792) [in Mém. Acad. Roy. Sci. (Turin) 5: 247 (1793)], does not give a name to the variety but refers to "in ericetis circa lacum Malioni". De Candolle did not mention a locality in the protologue.

= *J. montana* var. *latifolia* C. Vicioso in Anales Jard. Bot. Madrid 6(2): 80 (1946), nom. illeg., non Pugsley (1921)

folia subacuta. 1883" [mss. Pau] (lecto., selected
here, MA 122382!).

= *J. castellana* Sennen, Pl. Espagne 1929, n.º 7172 (1929-30), in sched.; Sennen in Butll. Inst. Cata-
lana Hist. Nat. 32: 101 (1932); *J. tristis* subsp.
castellana (Sennen) Sennen in Butll. Inst. Cata-
lana Hist. Nat. 32: 101 (1932), nom. altern.

Type loc.: as below.

Type: [Spain] "1929 (...) N.º 7172. (...) Madrid,
Dehesa de la Villa, 680 m., 1929-20-VII. Leg.
Sennen et Jeronimo" (iso., BM!, G!, MA
122393!).

The type has similar leaves to those of *J. crispa*
subsp. *serpentinica*.

= *J. tristis* subsp. *ateridae* Sennen in Butll. Inst.
Catalana Hist. Nat. 32: 101 (1932); *J. ateridae*
Sennen, Pl. Espagne 1929, n.º 7171 (1929-30),
in sched., nom. nud.; *J. ateridae* (Sennen) Sen-
nen, Diagn. Nouv.: 88 (1936)

Type loc.: [Spain] "No. 7171. (...) Hab.–Madrid:
Sierra de Guadarrama à Navacerrada, sol graniti-
que, 1800 m. Leg. Sennen, Jerónimo et Mauri-
cio".

Type: "1929 (...) N.º 7171 (...) *Jasione tristis* Bory vel J. Ateridae Sennen Madrid: Sierra Guadarrama à Navacerrada, 1830 m. 1929-31-VII. Leg. Sennen, Jerónimo, Mauricio" (iso., BCF!, BM!, G!, K!, MA 122407!).

= *J. crispa* subsp. *serpentinica* P. Silva in Agron. Lusit. 30: 225 (1970)

Type loc.: "NE Portugal, Bragança" –several specimens.

Type: [Portugal] "Trás-os-Montes e Alto Douro, Bragança, prope Campo de Aviação, Posto Hípico, in saxosis, solo serpentinoso-chromítico, 700 m, 28 vii 1964, P. Silva, B. Rainha & J. Martins 7359" (holo., LISE!). Several syntypes from the same area are cited in the protologue, but the holotype is the only one that clearly agrees with the original description.

= *J. crispa* var. *praelittoralis* Masclans in Collect. Bot. (Barcelona) 8: 124 (1972)

Type loc.: [Spain, Tarragona, Montes de Prades] "Typus: BC 601633. Valle de Castellfollit, Si, 1000 m, pinar de *Pinus sylvestris* (Leg. Masc., 28-VI-1954)".

– *J. sessiliflora* var. *gredensis* Lacaita, nom. nud.

NOMINA NUDA OR OTHER NAMES NOT IDENTIFIED

J. amethystina var. *intermedia* Willk. in Willk. & Lange, Prodr. Fl. Hispan. 2: 283-284 (1868)

Typ. loc.: [Spain] "(*J. humilis* Costa Fl. catal. ex p. et Lge. pl. pyren. exsicc. ex p.!, *J. amethystina* Coss. in Bourg. pl. hisp. exs. 1863 no. 2443!) (...) in montib. Carpetan. (Sierra de Gredos, Bourg.!), Extremadura superior. (Puerto de Miravete, Bourg.!) et Pyrenaeis (Pto. de Benasque, Lge.!, Sierra de Bassibé, Port de Calder, Costa!)." – Majo, Aug. (v.v.)".

J. andorrana Coustur. & Gand. in Bull. Soc. Bot. France 60: 556 (1913), nom. provis.

J. fallax f. *subalpina* C. Vicioso in Bol. Soc. Aragonesa Ci. Nat. 10: 102 (1911), nom. nud.

Type loc.: [Spain, Zaragoza, "en el Moncayo"]

J. genisticola Gand. in Bull. Soc. Bot. France 45: 594 (1898)

Type loc.: [Spain, León, Arbas] "Le 4 juillet 1898 (...) je montais donc à l'Arvas [sic], par la vallée du ruisseau qui débouche vers le pont de la collégiale d'Arvas (...) et qui prend sa source vers les névés du pic principal (...) *genisticola* Gandoher sp. nova! = *J. carpetana* form. *latifolia*...". No specimen has been traced at LY [Lyon].

J. humilis var. *elongata* Sennen in Trab. Inst. Catalana Hist. Nat. 3: 164 (1917-18), nom. nud.

Type loc.: "à les Agudes du Montseny et abondant à Nuria".

J. montana var. *glaberrima* Merino in Brotéria, Ser. Bot. 12: 114 (1914)

Type loc.: [Spain] "En los arenales y pinares proximos al Miño cerca de Camposancos, Pontevedra". Is probably *J. montana*.

J. montana var. *umbellata* Lapeyr., Hist. Pl. Pyrénées: 102 (1813)

Type loc.: [France, Hautes-Pyrénées] "Au Port de Pyeresourde sur le versant dans la Vallée du Louron".

J. perennis var. *alpestris* Willk. in Flora 35: 199 (1852)

Typ. loc.: [Spain, Huesca] "In Pyrenaeorum Aragoniae pascuis editis, praecipue locis irriguis frequens: Puerto de Canfranc, in valle Izas, circa Panticosa etc. ad alt. 4500-5500'. Junio c. flor".

J. perennis var. *intermedia* Coss., Notes Pl. Crit. 3: 121 (1851)

Type loc.: [Spain, Jaén] "In aridis montis regni Murcici, ad basim montis Sierra de Segura (E. Bourgeau, 6^a die Julii 1850.–pl. Esp. n. 776)".

J. perennis f. *megacarpaea* Coustur. & Gand. in Bull. Soc. Bot. France 60: 551, 556 (1913)

Type loc.: "Hab. Andorra, in monte Rialb, alt. 2500 m. (P. Cousturier)".

NOT JASIONE

J. obtusifolia Pau in Bol. Soc. Arag. 28 (1902); Feddes Repert. 3: 321 (1907). Sphalm in Index Kewensis, for *Jasonia* (Compositae).

We acknowledge the co-operation of the curators or directors of the following Institutes who sent material on loan: BCF, BM, Esc. Sup. Agrária Bragança Portugal, COI, G, GDA, JACA, JE, LISI, LISE, LISU, LY, MA, MAF, MGC. We acknowledge also the help and support that Professor Santiago Castroviejo (Madrid) gave us; Dr F. Festi (Rovereto) for information on Porta specimens; Susana Neves (Coimbra) for some information about types at Paris; Dr J. Parnell (Dublin) for general comments; R. Vickery (BM) for assistance with the type of *J. lusitanica*.

Fátima SALES, Departamento de Botânica, Universidade de Coimbra. P-3001-401, Coimbra, Portugal and Royal Botanic Garden Edinburgh. EH3 5LR, Scotland, U.K. & Ian C. HEDGE, Royal Botanic Garden Edinburgh. EH3 5LR, Scotland, U.K.

UNA NUEVA COMBINACIÓN EN *CAMPANULA* L. (CAMPANULACEAE)

Campanula specularioides Coss., descrita de la serranía de Ronda, ha sido aceptada por diversos autores, como: Fedorov in Tutin & al. (eds.), Fl. Eur. 4: 88 (1976), Gallego in Valdés, Talavera & Galiano (eds.), Fl. Andalucía Occid. 2: 565 (1987), etc. Según López González in Bol. Soc. Brot. ser. 2, 53: 299-308 (1980), las especies más cercanas son *C. lusitanica* L. y *C. decumbens* DC. En este grupo, el hábito, la forma de los dientes del cáliz y de las cápsulas, etc., son muy variables; hay todo el gradiente de caracteres intermedios entre las formas típicas de *C. lusitanica* (tallos erectos, con dientes calicinos lineares o linear-lanceolados y cápsulas obcónicas) y las típicas de *C. specularioides* (tallos decumbentes, con dientes calicinos elíptico-lanceolados y cápsula subbesférica). Las formas intermedias son frecuentes en el S de la Península y en el NW de África, especialmente en el Rif y en el Alto Atlas. Los datos cariológicos –Gallego in Lagasca 14(2): 286-

288 (1985); García Martín & Silvestre in Lagasca 13(2): 313-318 (1985)– también apoyarían un supuesto parentesco entre *C. lusitanica* ($n = 9$, 10) y *C. specularioides* ($n = 10$). No obstante, pensamos que las plantas rupícolas de las serranías de Ronda y Grazalema pueden reconocerse taxonómicamente.

Campanula lusitanica subsp. **specularioides**
(Coss.) Aldasoro & L. Sáez, comb. & stat. nov.

¿QUÉ ES *LOBELIA MINIMA* SIMS?

En el volumen 46 del conocido Curtis's Botanical Magazine se publica, con el número 2077, la lámina coloreada y la descripción de una planta “Native of the Cape of Good-Hope. Communicated by Mr. Colville, from his renowned [sic] nursery in the King's Road”. La lámina representa a una lobeliácea de hojas cortamente pecioladas y flores tribracteoladas, de un rosa pálido. En la descripción su autor la compara con *Lobelia minuta* L. [*Solenopsis minuta* (L.) C. Presl] y *Lobelia laurentia* L. [*Solenopsis laurentia* (L.) C. Presl].

Meikle, en su estudio del género *Laurentia* Adans. –cf. Kew Bull. 34(2): 373-375 (1979)– supuso que se trataba de una planta nativa de Mallorca, puesto que incluye el nombre entre los sinónimos del endemismo mallorquín *Solenopsis minuta* subsp. *balearica* (F.E. Wimmer) Meikle.

Posteriormente M.B. Crespo, L. Serra & N. Turland –cf. Taxon 45: 117-120 (1996)– designan como lectótipo la mencionada lámina 2077. Estos autores (loc. cit.) suponen que Sims se equivocó al indicar la procedencia del material, ya que, según ellos, en la región del Cabo no se ha encontrado una planta similar a *Solenopsis minuta* (L.) C. Presl o *S. laurentia* (L.) C. Presl.

El propio Linneo (Mant. Alt.: 292. 1771) cometió un error similar cuando hace también sudafricana la planta que describe como *Lobelia minuta* L. [*Solenopsis minuta* (L.) C. Presl], otro endemismo mediterráneo.

En contra de lo que se viene suponiendo, la suodicha lámina 2077 del Curtis Bot. Mag., lectótipo de *Lobelia minima* Sims, no parece apuntar a la planta mallorquina, más bien al contrario: el tamaño y el color de sus flores, la presencia de un verticilo de tres bractéolas en todos los pedicelos florales, el corto pecíolo foliar y la forma de la lámina son caracteres que nos hacen pensar que no se trata de una *Solenopsis*.

Si, como pretendemos, las plantas de Mallorca requieren el rango específico, asunto en el que coincidimos con otros autores –M.B. Crespo, L. Serra & A. Juan in Pl. Syst. & Evol. 210: 211-229 (1998)–, hemos de utilizar el restrictivo de F.E. Wimmer y proponer la combinación *Solenopsis balearica* (E. Wimm.) Aldasoro, Castro, Sales & Hedge, comb. & stat. nov.; *Laurentia minuta* forma *balearica* E. Wimm. in Ann. Naturhist. Mus. Wien 56: 334 (1948), basión.; typus: Majorca, Barranco de Sóller, 4 Julii 1869, Bourgeau 2770 [holotypus W, isotypus K].
